

Stablecoin Traceability — System Architecture

Evidence-first · configuration-driven · extensible via Client / BridgeTracer subclasses

DATA ACQUISITION LAYER

EVMClient

7 EVM chains · paged logs

TronScanClient

TRC-20 transfers

BridgeTracer (base)

Across · Stargate · Celer ...

ChainConfig

per-chain config object

ANALYSIS ENGINE

AMLANalyzer

core traceability engine

- bidirectional entity detection (IN / OUT)
- adaptive-depth BFS + hop decay
- evidence status · boundary marking

DOMAIN MODEL

RiskIndicator

one auditable evidence row

RiskReport

indicators + per-asset flow

THREAT-INTEL REGISTRIES — data, not code

bridges.json

35 bridges
traceable flag

blacklist · OFAC

freeze / sanctions
risk anchors

mixers · CEX

terminal /
risk entities
